Green Skill Hub

GREEN SKILL STARTER GUIDE

Kickstart Your Career in Sustainability

LEARN GREEN SKILLS • PLAN YOUR PATH • BUILD YOUR FUTURE

Green Skill Hub – Starter Guide
Green Skills Starter Guide
A practical introduction for students, career switchers, and professionals

1. What Are Green Skills?

Green skills are the knowledge, abilities, values, and attitudes needed to support a sustainable, low-carbon, and climate-resilient world.
They help individuals and organisations to:
- Reduce environmental impact
- Improve resource efficiency
- Respond to climate and ESG regulations
- Create new green products, services, and jobs

Green skills are **not only for "environment" jobs**. They are relevant across:
- Built environment (architecture, construction, real estate)
- Energy (renewables, efficiency, grids)
- Transport and mobility
- Agriculture and food systems
- Finance and ESG
- Technology and data (climate tech, clean tech)

2. Types of Green Skills

2.1 Technical Green Skills

Examples:
- Building energy modelling and efficiency
- Renewable energy design and operation
- Waste and water management
- Life cycle assessment (LCA)
- Sustainable materials and circular design

2.2 Core Sustainability Skills

Examples:
- Understanding climate science basics
- Net-zero and decarbonisation pathways
- Adaptation and resilience planning
- ESG concepts and frameworks
- Sustainable development and SDGs

2.3 Transferable Green Skills

These are skills you apply in any role, with a sustainability focus:
- Systems thinking
- Problem solving in complex environments
- Stakeholder engagement and communication
- Data literacy and evidence-based decision making
- Change management

3. Where Green Skills Show Up in Real Jobs

STARTER GUIDE

Green skills appear in three main ways:

1. New “green” roles
- Sustainability officer
- ESG analyst
- Energy modeller
- Green building consultant
- Climate risk analyst

2. Existing roles becoming greener
- Architect who designs net-zero buildings
- Engineer who focuses on energy-efficient systems
- Finance professional who integrates ESG
- HR manager who supports green culture and training

3. Supporting functions
- Educators and trainers who teach green topics
- Policy and advocacy roles
- Data and tech roles supporting climate solutions

4. Your Starting Point: Self-Assessment
Use this quick reflection to understand where you are today.

4.1 Your Background
- What did you study or train in?
- What industry are you currently in?
- What kind of work do you enjoy (technical, analytical, people-focused, creative)?

4.2 Your Exposure to Sustainability
- Have you taken any sustainability or green-related course before?
- Do you follow climate, energy, or ESG topics?
- Have you been involved in any project with a green element (even informally)?

4.3 Your Current Skills Snapshot
Tick or highlight what you already have some experience in:
- Technical / domain skills (e.g. buildings, energy, finance, data, design)
- General sustainability awareness
- Communication and stakeholder engagement
- Data, digital, or modelling skills
- Project or change management

This rough picture will guide which green skills you prioritize next.

STARTER GUIDE

5. Pathways to Building Green Skills

5.1 Learn the Foundations

Start with accessible, structured content:
- Introductory climate change and sustainability courses
- Short videos, explainers, and beginner guides
- Free MOOCs from trusted universities and platforms

Tip: Begin with 1–2 high-quality courses, not 10 at once. Focus on completing and applying what you learn.

5.2 Anchor to Your Existing Field

Ask:
"How can sustainability and climate change affect my industry and role?"
Examples:
- Architect → green buildings, resilience, building performance, certifications
- Engineer → energy efficiency, low-carbon systems, clean tech
- Finance → ESG integration, climate risk, sustainable finance
- IT/Data → climate data, dashboards, emissions tracking tools
- Education → climate literacy, green curriculum development

5.3 Combine Learning with Practice

Look for opportunities to practice:
- Volunteer or join projects related to sustainability
- Support a small internal initiative at work (waste, energy, awareness)
- Participate in competitions, hackathons, or research challenges
- Write, speak, or post about what you are learning.

STARTER GUIDE

6. Core Green Skills to Consider (Starter Set)

You don't need to learn everything at once. Start with a starter set like

1. Climate & Sustainability Basics

- Climate change causes and impacts
- Net-zero and mitigation vs adaptation
- Global and local policy drivers

2. Green Skills for Your Sector

- Built environment: green building, energy efficiency, materials
- Energy: renewables, storage, grids
- Finance: ESG integration, climate risk, sustainable finance
- Tech/data: climate data, dashboards, tools

3. Practical Tools & Frameworks

- Life cycle thinking
- Basic carbon accounting concepts
- Introduction to green building or ESG frameworks where relevant to you

4. Professional Skills with a Green Lens

- Communicating sustainability to non-experts
- Working in multidisciplinary teams
- Problem solving and innovation for climate challenges

7. How to Use Green Skill Hub with This Guide

Green Skill Hub is designed to support your journey in three ways:

1. Publications & Articles

- Read our periodic publications to understand global trends, language, and emerging opportunities in green skills.

2. Green Skill Updates

- Use the curated updates to find courses, certifications, and training relevant to your level and sector.

3. Resources & Toolkits

- Use templates, trackers, and guides (like this one) to organize your learning and career steps.

8. A Simple 30-Day Green Skills Plan

You can adapt this according to your schedule.

STARTER GUIDE

Week 1: Awareness & Orientation

- Read this Starter Guide fully.
- Complete 1 short intro course on climate or sustainability.
- Note key terms and how they relate to your field.

Week 2: Sector Focus

- Choose 1–2 topics relevant to your sector (e.g. green buildings, ESG, clean energy).
- Watch or read focused resources on that topic.
- List 3–5 emerging roles or opportunities you find interesting.

Week 3: Application & Reflection

- Use the Sustainability Career Roadmap Template to sketch your 6–12 month plan.
- Identify at least 2 skills you will actively develop.
- Look for at least 1 community, network, or initiative you can join.

Week 4: Action & Visibility

- Update your CV or LinkedIn with the course(s) you've completed and your green interests.
- Share one insight or learning (article, post, short reflection).
- Commit to the next concrete learning step (e.g. specific course, certification research, or project).

Final Encouragement

The green transition is not a single career, role, or certificate. It is a long-term shift in how the world works.

Building green skills is not about having everything figured out now, but about:

- Being curious
- Taking structured steps
- Staying consistent over months and years

Note: Use this guide as a starting point—not a finish line.
